About Marc

Unity Developer with 6 years of experience working with the C# language both alone and in a medium sized team. Outspoken and not shy to discuss things in order to get the most out of every task while keeping a clear view of what is needed and why. Always happy to bounce ideas and discuss things with anyone in the team.

Work Experience:

Unity developer | Chimpworks 2019 ~ 2025

- Worked both in solo projects and medium sized teams while keeping strict deadlines.
- Created and managed growing systems with strict performance requirements while dealing with platform specific issues.
- Helped mentor younger developers.
- Developed Tooling for both art and design to speed up their workflow.

Relevant skills

- C#
- Agile and scrum methodology
- Tool development
- Git
- Experience with Tabnine, Rider, Asana
- Software Architecture and design patterns
- Experience working in Android and IOS

Currently developing skills

- .NET, Javascript and Dutch
-

Interests:

Reading and video games are my 2 passions! Video games especially are the reason I started learning to code when I was around 12 as I wanted to make my own projects with whatever wild ideas I had.

Future Targets:

Being part of a well oiled team with fluid communication where I can learn new things and grow my skills into a senior position. I would also like to learn more management skills in order to migrate later on towards more of a management/lead position.

Projects of importance:

Rider Worlds

This project was a mobile game in the Unity engine that used scrum methodology and agile development where I worked as a part of a medium sized team for 10+ months as well as a solo developer for 8+ months.

Main responsibilities:

- Designing and implementing growing systems with strict performance requirements.
- Creating tools for other departments and working on packages for all projects in the company when needed.
- Handling deployments of the new versions of the app as well as any issue regarding 3rd party tools.
- Working with management in order to establish realistic deadlines for the work needed and keeping to them while maintaining the code quality.
- Taking the lead on creating documentation of our systems, design patterns in them as well as code structure in order to facilitate the shift of developers between projects.

Rider

This project was a mobile game in the Unity engine that used scrum and agile development where I worked with a team of 20+ people at its peak, with multiple departments and very strict performance requirements in order to function in old devices both for Android and IOS.

Main responsibilities:

- Designing and implementing growing systems with strict performance requirements along with other developers.
- Taking the lead on mentoring younger developers on system architecture as well as code quality
- Giving support to other developers and handling requests from other departments
- Creating and managing documentation regarding our code base as well as enforcing coding standards in the project.
- Handling deployments of the new versions of the app as well as any issue regarding 3rd party tools
